

PROCESS

Technology of process

Process	Technology of process
1. Raw material selection	Selection of raw materials based on quality and quantity requirements.
2. Material preparation	Preparation of raw materials into a form suitable for processing.
3. Material transport	Transport of raw materials to the processing area.
4. Material storage	Storage of raw materials in a secure and controlled environment.
5. Material processing	Processing of raw materials into a finished product.
6. Material inspection	Inspection of the finished product to ensure quality and safety.
7. Material packaging	Packaging of the finished product for distribution.
8. Material distribution	Distribution of the finished product to the market.
9. Material recycling	Recycling of waste materials back into the production process.
10. Material disposal	Disposal of waste materials in a safe and environmentally friendly manner.
11. Material management	Management of the entire production process, from raw material selection to final distribution.
12. Material control	Control of the production process to ensure quality and safety.
