

PROCESS	Technology of process
1. Raw material selection and preparation	Selection of high-quality raw materials and thorough cleaning to remove impurities.
2. Mixing and blending	Use of specialized mixing equipment to ensure uniform distribution of ingredients.
3. Heating and drying	Controlled heating and drying processes to achieve the desired texture and moisture content.
4. Cooling and packaging	Efficient cooling systems followed by secure packaging to maintain product quality.
5. Quality control and testing	Regular sampling and testing throughout the production process to ensure consistency.
6. Storage and distribution	Proper storage conditions and efficient logistics for timely delivery to customers.
