

## ARTIKELOMSCHRIJVING:

|                     |                                                                                                                            |
|---------------------|----------------------------------------------------------------------------------------------------------------------------|
| NAAM:               | Aangepaste 3D-printer Machinedelen / componenten in China                                                                  |
| VERWERKEN:          | CNC-bewerking.                                                                                                             |
| MATERIAAL:          | Aluminium, roestvrij staal, messing, brons, zink, legering, kunststof enz.                                                 |
| DIMENSIES           | Volgens de tekening van de klant.                                                                                          |
| AF HEBBEN:          | Anodiseren, zandstralen, warmtebehandeling, polijsten, poeder coating, galvaniseren, spuiten, schilderen, zeefdruk etc.    |
| TOLERANTIE:         | kan oplopen tot +/- 0.002 mm.                                                                                              |
| KWALITEIT CONTROLE: | 100% geïnspecteerd.                                                                                                        |
| SPECIFICATIE:       | OEM-service, strikt per tekening en monsters.                                                                              |
| AFLEVERTIJD:        | 10-25 dagen --- Bestverkopende China fabricage hoge precisie aangepaste CNC draaibank verspanen onderdelen.                |
| TOEPASSING:         | aluminium spuitgieten onderdelen, mijnbouwaccessoires, machines accessoires, auto-onderdelen etc.                          |
| Hoofdklant:         | VS, Canada, Australië, EU, etc.                                                                                            |
| CERTIFICATIE        | ISO9001, SGS.                                                                                                              |
| BETALING:           | T / T of Paypal of anderen --- Bestverkopende China fabricage hoge precisie aangepaste CNC draaibank verspanen onderdelen. |

## PRODUCT DETAILS

XY-GLOBAL  
High Quality Competitive Price High Service

WELCOME TO OUR COMPANY

**High precision processing technology**

**High quality surface treatment**

## OUR ADVANTAGES

XY-GLOBAL  
High Quality Competitive Price High Service

WELCOME TO OUR COMPANY

1

### Profession

A professional OEM&ODM Die casting & CNC machining manufacturer.

2

### Team

A strong and professional engineers team with more than 10 years relative experience.

3

### Experience

The professional sales team and QC team have 5-10 years experience.

4

### Quality assurance

Strict quality control process and 100% inspection.

5

### Professional inspection

Our strict final QC team will inspect the dimension, appearance and package and send the professional inspection report to you before shipping.

6

### Rich export experience

Rich export experience to Europe, United States, Canada, Australia etc..

## CERTIFICATE

XY-GLOBAL  
High Quality Competitive Price High Service

WELCOME TO OUR COMPANY

If you want to be our customer, pls kindly find the following FAQ from XY-GLOBAL:

### **1. Who are your main customer?**

Our major customers are ASUS, FLEXTRONICS CHINA, FLEXTRONICS ISRAEL, FLEXTRONICS PORTUGAL.

### **2. What is your main products?**

XY-GLOBAL focus on the production of Die Casting Parts, CNC Machining Parts, CNC Lathe Machining and more. You can see the detailed from <http://www.diecastingpartsupplier.com>

### **3. How many people are there in your sales team? How many engineers?**

Currently we have 10 sales and 5 professional engineers to support clients in product area.

### **4. What document should the customer send to us for cost caculation ?**

In order to provide our most accurate price, customer need to provide the 2D drawings, 3D drawings, order quantity, surface treatment, delivery time, etc.

### **5 How to keep your products quality stable ?**

We keep our products in IQC,IPQC,OQC different processing to control strictly. Meanwhile we have 8D report to analysis the problems.

### **6. How to protect our products, molds and information ?**

We will sign the confidential contract with customers to protect all the information. Then in the production processing, the documents which customer sent to us will be under control, then engineer team will transfer customer drawing into our format, and send to production department or related for further action. And the molds are dedicated for each client.
