

PROCESS

Process	Description
1. Raw material inspection	Inspection of raw materials before processing.
2. Material handling	Transportation of materials from storage to production area.
3. Pre-heating	Heating of materials to a specific temperature.
4. Mixing	Combining different materials in a specific ratio.
5. Extrusion	Pushing material through a die to create a specific shape.
6. Cooling	Reducing the temperature of the extruded material.
7. Drying	Removing moisture from the material.
8. Grinding	Reducing the size of the material particles.
9. Sieving	Separating particles of different sizes.
10. Packaging	Putting the final product into bags or containers.
11. Storage	Storing the finished product in a warehouse.
12. Distribution	Transporting the product to the customer.
